Migrate to innovate:
Strategic insights for modernisation leaders

The migrate to innovate event will provide a strategic overview of cloud transformation and highlight areas you may want to explore further, such as:

- Hurdles and challenges of migrating to the cloud

- AI implementation considerations
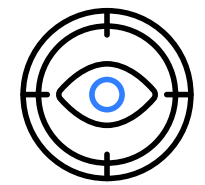

- Data strategy

The event will explore how to leverage cloud technologies, AI, and data strategy to drive meaningful change and scalability within your organisation. BJSS offers eBooks that provide comprehensive support throughout every stage of your cloud transformation journey.
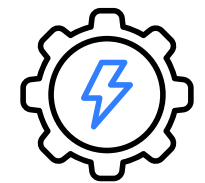

Contents

Overcoming cloud transformation hurdles

True transformation empowers organisations to drive change, deliver value, streamline operations, and scale effectively.

This eBook outlines **10 essential steps** to overcoming common challenges in cloud transformation, offering expert insights, real-world case studies, and proven methodologies to support AI adoption and maximise the value of your business data.

**Set your vision, strategy, and operating model to get off to a flying start**

**Empower your cloud team with learning and development opportunities to go the distance**
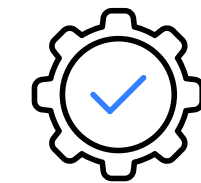

Ensure security and compliance are built in from day one
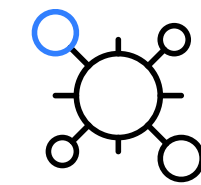

Pick the best cloud for your needs

**Lay the foundations to help you scale with confidence**

**Improve predictability through observability**

Operate and govern with confidence

Move beyond the 'lift-and-shift' to truly modernise and transform

Boost your developer experience and productivity

Ensure cloud, data, and AI are in harmony to drive business transformation

Successfully implementing AI

This eBook serves as a comprehensive guide for organisations navigating the complexities of AI adoption. It highlights critical considerations before, during, and after implementation, with a focus on ethical practices, effective governance, and maximising benefits.

You'll find key topics to help shape your AI journey:

- The importance of AI in the modern business landscape

- Developing an AI implementation strategy – key considerations

- Responsible AI – what ethical AI means for organisations

- AI and Corporate Digital Responsibility (CDR)

- Supporting customers with AI

- AI governance – powering responsible AI

- Analysing the valuable outcomes of AI implementation

Successful AI implementation in business – What are the key considerations?

A BJSS eBook

# Incorporating Data EXP into your data strategy

Is your organisation ready to revolutionise its data strategy and gain actionable insights or adopt AI effectively?

This eBook introduces the Data EXP framework, a powerful approach to accelerate your data strategy, achieve business goals, and drive growth in as little as eight weeks.

By aligning Data EXP with your organisation's goals, you can seamlessly integrate and optimise data initiatives, fostering agility, scalability, and innovation. This dynamic framework ensures your data-driven decisions lead to sustainable growth and long-term success.

The Data EXP process:

- **EXPlore:** Collaborate to co-create tailored data strategies.
- **EXPeriment:** Test, validate, and refine strategies through proof of value.
- **EXPand:** Implement and scale strategies for measurable business impact.

Get ready for migrate to innovate

Join us at the **migrate to innovate event on 11th December**, featuring a breakfast briefing under Chatham House Rule, which will focus on the benefits of migration and modernisation solutions. Key topics include modernising cloud infrastructure, improving efficiency, reducing costs, and preparing for data and AI adoption.

Speakers such as BJSS' Head of Cloud & Platform, Michael Fordham and Head of AI, Simon de Timary will deliver keynote sessions, while interactive breakout sessions on successful AI adoption and successful use of data will explore key considerations, business use cases, and business enablement.

The event aims to provide practical advice on governance, data, and service delivery, showcasing real-world examples of successful deployments. Attendees will gain insights into the impact of modernisation, the importance of business data, and how to become AI-ready all whilst networking with BJSS and AWS experts.
